Genetics

Question: Is it wise to control the genetic code now or in the future?

Answer: It is not possible to overcome the genetic code in the most literal sense. Even though gene separation and gene splicing is possible, the genetic code is a record, a book, a tablet of karma. The slashing of a page or a part of such a Book of Life or karma can only delay or complicate the karma of a soul. Thus the attempt at controlling genetics by tampering with genetic code can only complicate the karma of mankind.
